FAQ's.

1) What is a string?
→ String is an array of characters.

2) Explain string Functions : strcmp(), strlen(), strcat(), strcpy().
→ • strcmp() - returns 0 if string1 and string2 are the same ; less than 0 if string1 < string2 ; greater than 0 if string1 > string2.
• strlen() - returns the length of string.
• strcat() - concatenates string2 onto the end of string1
• strcpy() - copies string2 into string1

3) In string comparisons, if two strings are same, what will be result of comparison?
→ Zero will be returned.

4) What is the length of the string "Data Structures".
→ 15

5) Explain how to use strcpy() function?
→ Accept two strings as input & output string. Use strcpy(output, input) function to copy the contents of input string into output string.

6) What is strcat() string function?
→ Appends first n characteristics of a string at the end of another.

7) What is strrev()?
→ It is used to reverse a string.

8) Which function is more appropriate for reading in multi-word string?
→ gets()

9) What are the applications of strings?
→ Character arrays or strings are used by programming languages to manipulate texts such as words & sequences.

10) What is the limitation of array of pointers to strings?
→ When we are using an array of pointers to strings we can initialize the strings at the place where we are declaring an array, but we cannot receive the strings from keyboard using scanf().
