B25ETIDO5 DSA, Practical-10

FAQ's.

1) What is UART?
→ A serial communication protocol used to send and recieve data between devices.

2) Why use circular buffer for UART?
→ It optimizes space and allows continuous data flow without memory shifting.

3) What happens when buffer is full?
→ New data is lost or should be managed until space is available.

4) Is UART synchronous or asynchronous?
→ UART is asynchronous communication.

5) What is baud rate?
→ The speed of data transfer, measured in bits per second (bps).
