FAQ's

1) What is binary search?
→ A search algorithm that divides the sorted array into halves to locate the key.

2) What is the condition for using binary search?
→ The array must be sorted.

3) What is the difference between iterative & recursive binary search?
→ Iterative uses loops; recursive uses function calls.

4) What happens if the element is not in the array?
→ The function returns -1.

5) What is time complexity of binary search?
→ O(log n)

6) Can binary search be used on unsorted arrays?
→ No, it requires the array to be sorted.
