B2SETDDS DSA, Practical-5

FAQ's.

1) What is LIFO structure of stack?
→ The elements in the stack are inserted from top & can be removed from top only. Hence element last inserted is removed first.

2) How stack is represented?
→ Stack is represented using array or linked list.

3) What are the possible operations with stack?
→ 1) PUSH()
2) POP()
3) StackEmpty()
4) StackFull()

4) Explain the stack empty & stack full operations.
→ When stack is full, top value equals max-1 & when stack is empty, top value equals to 0.

5) Explain push() function in C for stack using array.
→
```
void push(stack *s, int x)
{
  s->top = s->top+1;
  s->data[s->top] = x;
}
```

6) Explain pop() function in C for stack using array.
→
```
int pop(stack* s)
```

```
{
 int x;
 x = s→data[s→top];
 s→top = s→top-1;
 return(x);
}
```

7) Explain the concept of double pointer.

→ Double pointer is actually pointer to a pointer
eg. int **p
