B2SETI005 OOP, Practical - II

FAQ's.

1) What is a template in C++?
→ A feature enabling generic programming for functions and classes.

2) What is the difference between a function template & a class template?
→ Function templates handle generic functions, while class templates handle generic classes and containers.

3) When does the compiler generate a specific template instance?
→ When the template is instantiated with concrete data types.

4) What are the main advantages of templates?
→ Code reusability and type safety.

5) How are templates related to the STL?
→ STL containers and algorithms are built using class and function templates.
